Education

University of Washington GPA**: 3.6/4.00**
Bachelor of Science in Computer Science and Software Engineering *Expected Graduation: June 2028*

- Dean's List
- **Relevant Coursework:** Data Structures and Algorithms (C++), Object-Oriented Programming (Java), Artificial Intelligence (Python)

Technical Skills

Languages: Java, Python, C++, JavaScript, HTML
Frameworks & Libraries: FastAPI, Electron.js, Node.js, Swing, Pandas
Databases & APIs: SQLite, Turso, Groq, OAuth 2.0, REST APIs
Developer Tools: Git, Docker, Linux, CI/CD

Experience

DataAnnotation **July 2026 – Present**
Software Developer – AI Code Evaluator (Contract) *Seattle, WA*

- **Conduct rigorous code reviews** and debug complex Python implementations, ensuring **optimal algorithmic efficiency**, secure coding practices, and edge-case error handling to refine AI code generation.
- Design advanced test cases utilizing **prompt engineering** and worked in **agentic workflows** to evaluate and improve **Large Language Models (LLMs)** on intricate Python tasks, including agentic system design and data pipeline architecture.
- Analyze AI-generated Python scripts for syntax accuracy, logic errors, and **architectural flaws**, providing detailed technical feedback to enhance **model context reasoning** and generation quality.

Projects

Capstone – UW AI Course Advisor | Live | GitHub
Python | HTML | FastAPI | Llama 3.3 | Groq | SQLite | Turso | Docker | Git

- **Drove agile development** in a 3-person team to architect a full-stack AI degree planner, successfully reducing manual course scheduling time for UW Bothell students by an estimated **95%** (from 45 minutes to < 2 minutes).
- **Led technical architecture alignment**, championing the integration of Llama 3.3 70B via Groq's LPU alongside local Ollama models, which accelerated AI inference speeds by over **400%** (achieving under 5-second latency).
- **Collaborated to engineer data pipelines** using Python and OCR for transcript parsing, achieving **90%+** requirement extraction accuracy across **35** unique major catalogs stored in a Turso cloud database.
- **Streamlined full-stack integration** between the FastAPI backend and HTML frontend by facilitating pair programming, reviewing pull requests, and resolving Git merge conflicts to maintain highly responsive, sub-**150ms** API response times.

Textify | GitHub
JavaScript | Electron | Node.js | Spotify Web API

- **Engineered a cross-platform desktop application** using Electron and Node.js to automate large-scale data extraction from Spotify APIs, seamlessly managing API rate limits and pagination for complex, **1,000+** track datasets.
- **Developed an AI-integrated workflow** that empowers users to export raw data, process it via external LLMs, and parse and re-import the curated results back into the live Spotify ecosystem.
- **Built a custom OAuth 2.0 authentication flow** and implemented local JSON persistence mechanisms to securely manage user credentials and facilitate seamless auto-reconnect features across sessions.
